# Ruby on Rails 5.x

Do início ao fim!

Gem Mailgun-Ruby

https://github.com/mailgun/mailgun-ruby

Gemfile

```
group :production do
   gem 'mailgun-ruby', '~>1.1.6'
end
```

Credentials

EDITOR=vim rails credentials:edit

MAILGUN\_KEY: asdfasdfasdfasdf

Crie o arquivo...

config/initializers/mailgun.rb

Adicione o conteúdo...

```
Mailgun.configure do |config|
  config.api_key = Rails.application.credentials.MAILGUN_KEY
end
```

Altere config/environments/production.rb

```
# Devise Config
config.action_mailer.default_url_options =
{ host: 'www.timetoanswer.com.br' }
```

Altere config/environments/production.rb

```
# Mailgun Config
config.action_mailer.delivery_method = :mailgun
config.action_mailer.mailgun_settings = {
   api_key: Rails.application.credentials.MAILGUN_KEY,
   domain: 'mg.timetoanswer.com.br'
}
```

Faça um novo commit e deploy

```
git add .
git commit -m "Configurando o envio emails"
git push origin master
cap production deploy
```
